...to care for women's health and wellness.

Mission

Eurogine was founded over 30 years ago with the aim of developing and manufacturing for the Spanish market products for contraception and family planning, as well as for gynaecological examination, diagnosis and surgery, specialized since then in the development and manufacturing of copper-bearing Intrauterine Devices and thus becoming the only domestic manufacturer of IUDs.

Currently, Eurogine distributes its products in more than 50 countries in Europe, Asia, Africa and South and Central America.

Our values

More than 30 years working for the sexual and reproductive health of women.

Worldwide pioneers in the research and development of copper-bearing Intrauterine Devices.

Recognized brand worldwide in gynaecology and contraception.

Execution and control of complete industrial / commercial circuit: research, development, manufacturing, distribution and sales.

Complete assessing for gynaecological consultation.

Vocation to improve the daily life of women, fretting that those elements necessary for sexual and reproductive health are the less invasive possible and comfortable to use.

Human team of professionals with extensive experience in the sector and in continuous training.

Social awareness in close collaboration with different NGOs and social organizations in various countries.

Agility and quality service worldwide.

Oriented production processes respecting the environment.

Copper-bearing intrauterine devices

The IUD has been determined by the WHO as the best option for birth control due to its excellent COST-EFFECTIVE-INNOCUOUNESS relation.

Its contraceptive benefits are very high in comparison to its disadvantages, which can be considerably reduced with a correct choice of models and/or sizes, and with a correct insertion.

...more than 30 years of experience in the health sector.

Quality

Due to the increasing demand and the substantial international expansion Eurogine has experienced over the last 15 years, it inaugurated new facilities where it has leading-edge technology applied to production, storage, quality control and R&D&I.

Eurogine maintains a management system based on the ISO 13485 standard and this is periodically audited by the accredited bodies.

Technology

In 1998, Eurogine, in collaboration with the Politechnique University of Catalonia and the Center for Technological and Industrial Development, demonstrated that, in some cases, silver, despite of being a noble metal, could be corroded and its reaction against uterine fluids could allow the fragmentation of the copper wire and consequently decrease the contraceptive effectiveness.

As a result of that, Eurogine developed a 99,99% pure copper wire with a gold core, which is not affected by the corrosion and is completely biocompatible with the body. This wire improves the contraceptive effectiveness and eliminates any possible allergy to silver.

That new copper wire was applied to Gold T IUD, which also offers an adjustable insertion system that ensures, by means of a safety piston, the correct placement of the IUD at the fundus and prevents the risk of perforation.

Our products

Our purpose: to research, to manufacture and to distribute products for gynaecology
